

Mrs. Spreckman's Second Grade Science Class

In this lesson, the students' learn about volcanoes, how they form, and why they erupt. A volcano is a mountain with a hole at the top, where hot, melted rock (called magma) comes out and becomes lava when it reaches the Earth's surface. Volcanoes can erupt in different ways—some erupt with flowing lava, while others explode with ash and gas.

Name ST

Apple Volcano

Materials Needed

1. baking soda
2. Vinegar
3. Soap
4. glitter
5. apple

Draw a picture of the experiment

Name Brianna

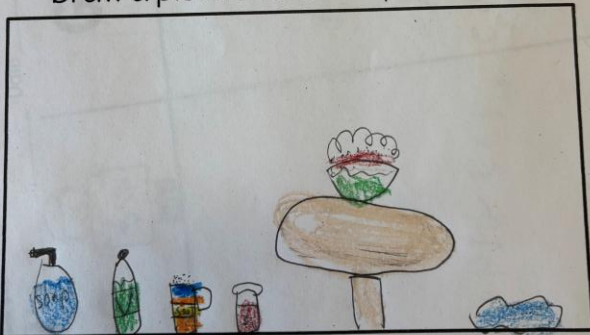

Apple Volcano

Materials Needed

1. baking soda
2. vinegar
3. soap
4. glitter
5. apple

Draw a picture of the experiment

Name Isabella

Apple Volcano

Materials Needed

1. baking soda
2. vinegar
3. soap
4. glitter
5. apple

Draw a picture of the experiment
