

Dear family,

This year and as part of the Science curriculum, your child has access to Studies Weekly- a set of printed texts in periodical format paired with a robust online learning platform. This online experience includes articles, images, videos, artwork, assessments, and activities that extend learning beyond the classroom. This program is:

- Fully aligned with the Next Generation Science Standards (NGSS)
- Hands-on with open-and-go lessons
- Adaptable to in-class or remote learning
- Driven by guiding questions that push students to explore

In class, I will have an online tutorial to learn how to navigate a student's account dashboard. This program is purchase by me and student can't log in to it through Clever. I will be using the Science Studies Weekly program in conjunction with our STEAM projects too. The students will begin the school year learning about physical science. I will then continue with earth and life sciences. The curriculum will include a combination of hands-on learning, reading, and writing activities. I hope your child enjoys experiencing science this year through the Studies Weekly Science curriculum.

Sincerely,

Mrs. Faour
