

CORONAVIRUS

A virus is a very tiny germ that makes people sick. The new virus spreading around the world is called the coronavirus. It makes most people cough, feel tired, and have a fever. But other people can become very, very sick from it. The virus was first found in Wuhan, China last December. You can help stop the virus by washing your hands, keeping your hands away from your face, and by staying home as much as you can. It's important that everyone follows these rules so that the virus doesn't spread to more people.

Who should be washing their hands?	What is a virus?
When was the coronavirus first found?	Where was the coronavirus first found?
Why is it important to wash your hands?	How can you stop the coronavirus?
