

# Each Plant's Parts

Lexile Level: BR-200

Each and every plant you see has  
four important parts.

If you would like to learn them,  
now is the time to start.

The roots are the first part. It's the part you cannot see.

The roots collect water. Plants drink  
like you and me.

The stem is the next part. It is the part above the ground.

The stem gives a plant some height  
and moves water all around.

Leaves are the next part, getting  
energy from the sun.

Leaves turn sunlight into food. This  
job is never done.

Flowers are the last part. You've probably seen a few.

They come in every size and shape  
and every colour, too.

Each and every plant you see has  
these four parts to show.

And when each one does its job, it  
helps the plant to grow.
